

Welcome to a new edition of the QROWD bimonthly newsletter.

November 2019

Welcome to our new edition of the QROWD's newsletter. In this last two months, QROWD has participated in several events. We highlight our participation in the European Big Data Value Forum 2019, held in Helsinki, where the QROWD team had the opportunity to present to the whole community the result of the work that has been done in last years.

In this issue:

- QROWD at the Smart City Expo World Congress
- Voices from the QROWD series #6
- QROWD at the European Big Data Value Forum 2019
- Drones and Smart Cities
- Upcoming events (December 2019 - January 2020)

QROWD at the Smart City Expo World Congress

The Municipality of Trento has taken part in the Smart City Expo World Congress held in Barcelona. This year, Municipality of Trento has pitched about the innovative solution of the QROWD project to map mobility items such as bike racks and parking spots. Read more about this, [here](#).

Voices from the QROWD series #6

Do you want to know what is behind QROWD? In this section you can join us in discussing the experiences of members of our team. They will show you how our project works, demonstrate its value, and explain their own expert and unique experiences behind the initiative. We invite you to the new, 6th article of this series, [here](#).

QROWD at the European Big Data Value Forum 2019

The QROWD project have recently been privileged to attend and showcase at the European Big Data Value Forum (EBDVF2019). Hosted in Helsinki, the event is an industry-driven and fully self-financed international non-for-profit organization. It brings together almost 200 members from all over Europe with a well-balanced composition of large and small and medium-sized industries (over 30% of SMEs), as well as research and user organizations. To take a look at some of this event in more detail click it [here](#).

Drones and smart cities

In the past couple of years drones have become the new big player for portable, diverse and reduced-user interaction technology. Valuable at accessing areas that humans and other vehicles simply cannot, there are many good reasons that drones are predicted to become the next big driver of automated gadgets and services within the next five years. You can read more about this [here](#).
